Year on year, the pressure to build more complex projects in less time, with fewer resources and a tighter budget is growing exponentially.

However, the potential for planning and scheduling teams across the nation to revolutionize how to deal with and overcome these challenges is increasing, too.

Advancing Construction Planning and Scheduling is returning to Dallas for the second year to look beyond traditional techniques and redefine best practice in the industry. You'll hear how owners, contractors and trades across the US are leveraging innovation in fields like automation, BIM, schedule monitoring and updating, and more – to enhance workforce efficiency, and deliver on-time, to budget. Don't be afraid to take the step to transform the standard of your team's planning and scheduling. Join us this September.
